### Product Features :

- Compatible and Interchangeable with DropsaÆ Accumino and Dromatic System
- More compact design. 1/8+1/8+BSP injector cartridge allows many new configurations.
- High Reliability. The 33V Injector is fully assembled, tested and certified on a robotic system.
- Manifolds for compatibility with other systems.

	<b>260-1000 cSt</b>	200	200	200
	<b>NLGI 0</b>	200		

\* Minimum time of release depending on the specifics of the systems where V33 injector are mounted.  
If they need to be assembled on medium or large . sized systems, please contact DropsaÆ technical . commercial department to check their real time of release

\*\* Point delivery

## Introduction E Operating Principle of the V33 Injector Series

The system is pressurized and oil flows into the Inlet side of the injector. The Lip seal check mechanism allows oil to flow past blocking off the Central Lubricant Passage.

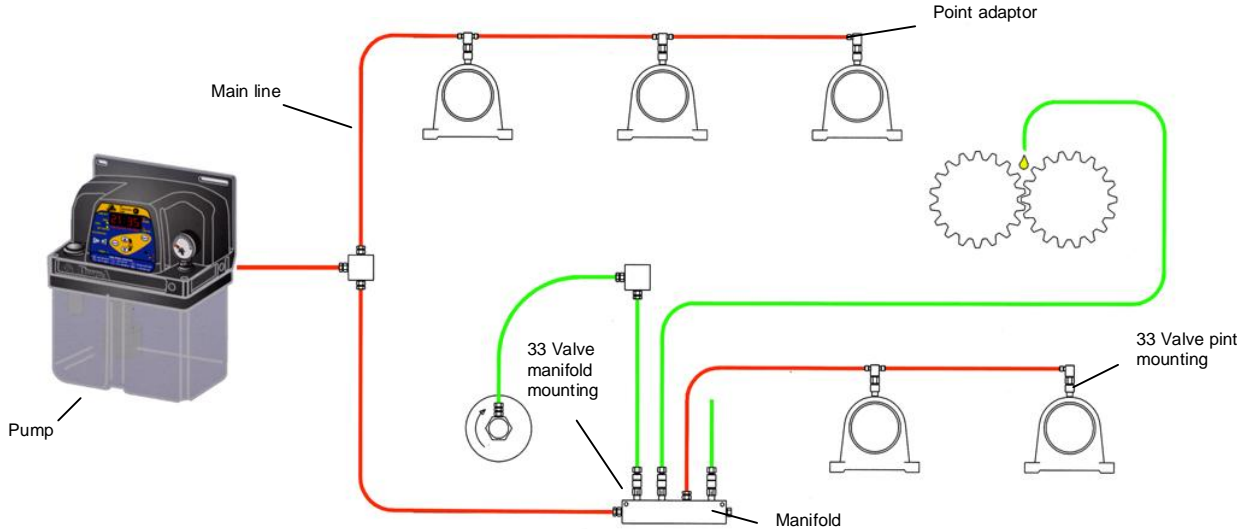

Lubricant enters the upper chamber of the injector which causes the Piston & O-Seal to move downwards pushing the oil accumulated in the Output chamber (from the previous cycle) towards the lubrication point.

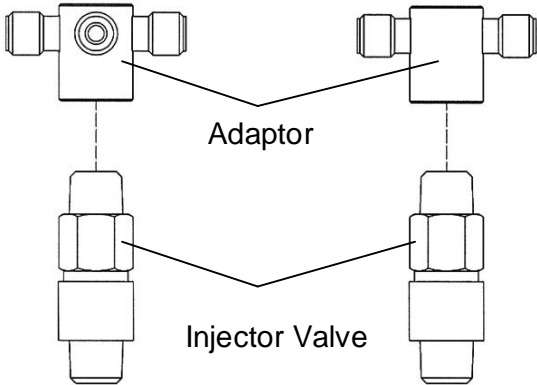

The final stage occurs when Pressure is released from the Inlet resetting the injector. During this phase the Spring pushes the piston & O-Seal back upwards, together with the check mechanism that permits the lubricant to flow across the Central Lubricant Passage and back into the Output Chamber, ready for the next lubrication cycle.

Example Application Using Smart Pump and 33 Valves.

Point Adaptor Assembly Example.

E Adapter with rotary connection port	EC
X Adapter	XN
X Adapter with rotary connection port	XC

A close-up, low-angle shot of the Dropsa logo on a building's facade. The letters are large, three-dimensional, and illuminated from within, giving them a glowing appearance. The building's exterior is a light-colored, textured material. A digital display on the roof shows the number '18'.
